

FOR CRYPTO EXCHANGES, CEFI PLATFORMS & NEOBANKS

The Product Shelf we ship to you

Perps, securitised leverage, structured products and 24/7 real-world assets — delivered through one integration, one broker of record and one risk engine.

NECESSITY

Perps

Every asset class, no expiry, one venue relationship.

THE REVENUE ENGINE

Securitised perps & ETPs

Up to 30x, inside a security. No margin calls.

THE DEPOSIT HOLDER

Structured products

Covered calls, shark fin, protected notes.

THE DIFFERENTIATOR

24/7 RWA

Equities, metals, commodities — weekends included.

You have the users. We deliver the products.

WHAT YOU BRING Your platform

A user base you have already paid to acquire, deposits on balance, and 24/7 operations.

YOU ALREADY HAVE

Spot crypto · MiCAR
Users & deposits
24/7 operations
The front end

YOU ARE MISSING

A MiFID licence
Leverage in a wrapper
Option pricing & hedging
Real-world assets

WHAT DLT DELIVERS

A finished product, not a building project

Licence and broker of record — if you need it

We are a MiFID investment firm. If you already hold the permission, you face your own client and we sit behind you. If you do not operate under MiFID yourself, we can face your end client on every leveraged and structured position — so you list the product without holding the risk or the permission. Your choice, product by product.

One API that quotes and prices everything

A single interface that returns a live, tradable price on any asset class we cover — crypto, equities, pre-IPO names, indices, metals, commodities and FX — and on any instrument shape built on them: perps, certificates, turbos, options and structured notes. One integration, one price source, the whole shelf.

Pricing, risk and hedging engine

The same engine prices a 30× turbo, a covered call and a Saturday gold quote. It is already in production — every product on the next slides runs on it.

WHAT YOU GET A shelf you can list

Four product families, one API, one counterparty, one settlement flow in fiat or USDC.

DELIVERED BY US

Product & pricing
Execution & clearing
Risk & hedging
Reporting & KIDs

KEPT BY YOU

The user relationship
The UX and the brand
The fee you charge
The deposit

One integration

REST + FIX. Quote, trade, position, settle. Same contract for every product family.

Settlement in USDC or fiat

No new rails. We settle into the account you already use.

Perps are the price of entry. The rest is how you get ahead of the venue next door.

LEVERAGED PRODUCTS

NECESSITY

Perps

A futures contract with no expiry. Your user posts margin and holds the position as long as they like — on crypto, equities, metals and commodities.

The first thing every one of your competitors lists. Table stakes, and the venue relationship everything else hedges through.

Up to 20x · crypto, equities, indices, metals, commodities · **live today**

EXAMPLE

BTC perpetual, 20x — no settlement date to manage

LEAPFROG

Securitised perps & ETPs

It trades exactly like a perp. Same screen, same long/short, same leverage slider, no expiry — structured deliberately to replicate the perp experience your users already know, only with **more leverage**.

Any underlying, not just crypto: BTC and altcoins, **pre-IPO names** (OpenAI, SpaceX, Anthropic), single equities, indices, gold and silver, oil and commodities, FX. If we can price it, we can wrap it.

Why it beats a perp account: up to 30x instead of 20x, no margin calls, no negative balances, and no derivatives permission needed to list it.

Up to 30x · loss capped at the premium · ISIN or token · **live today**

EXAMPLES

BTC turbo long, 30x — loss capped at the premium

Pre-IPO long, 10x — an underlying no perp venue lists

LEAPFROG

Structured products

A package that shapes the payoff. Most of the money sits somewhere safe earning interest; a small slice buys an option.

The only family that **locks a deposit in place** for one to three months — and the one that reaches users who will never touch leverage.

1 week – 3 months · capital protection or enhanced yield · **live today**

EXAMPLES

Covered call — premium income, capped upside

Shark fin — capital back, plus a range bonus

LEAPFROG

24/7 RWA

Round-the-clock pricing on real-world assets, so you keep quoting equities, metals and commodities when the underlying market is shut.

Across all three shapes your users already understand:

WE PRICE

Spot · tokenised equities, metals, commodities

Leverage · perps and CFDs, weekends included

ETPs · certificates on the same underlyings

Every asset class, every product shape — from one integration

● Available now ● Next release · Q4 2026

Rows = asset classes ↓ · Columns = product families →

ASSET CLASS ↓ / PRODUCT →	Spot / Delta-1 <i>Tokenised form</i>	Perps <i>Up to 20x</i>	Securitised leverage <i>Up to 30x, in a security</i>	Structured products <i>Yield & protection</i>	24/7
Crypto BTC · ETH · majors	Crypto spot Integrated	Crypto perps Live	KO certs · turbos · minis · factors Available	Shark fin · covered call · ZIC Live — two venues	24/7 native
Equities & indices US & EU single names	Tokenised equities Available	Equity & index perps Live	KO certs · turbos · minis Available	Covered call · protected note Q4 2026	24/7 DLT-priced
Precious metals Gold · silver · platinum	Tokenised metals Available	Metal perps Live	KO certs · turbos · minis Available	Covered call · protected note Q4 2026	24/7 DLT-priced
Commodities Oil · gas · copper	Tokenised commodities Available	Commodity perps Live	KO certs · turbos · minis Available	Covered call · protected note Q4 2026	24/7 DLT-priced

WHAT THIS MEANS One integration covers the whole grid. Adding an asset class or a product family is **configuration on our side** — not a new build, a new licence or a new counterparty on yours.

The instruments we can deliver today

Leverage

All available on crypto, equities & indices, metals and commodities

INSTRUMENT	WHAT THE USER GETS	LEVERAGE	MAX LOSS	STATUS
Perpetual future	Margin position with no expiry, funding paid between longs and shorts	up to 20×	Margin + top-up risk	LIVE
Securitised perp	The same perp economics as an open-end certificate — fully paid, no margin account	up to 30×	The premium paid	LIVE
Turbo / KO certificate	Directional bet with a knock-out barrier; the closer the barrier, the higher the leverage	3×	The premium paid	LIVE
Mini future	Open-end turbo with a stop-loss set above the strike — residual value paid back on a knock-out	2×	The premium, less residual	LIVE
Factor certificate	Constant daily leverage, no barrier — it can never be knocked out	±2×	The premium paid	LIVE
Tracker certificate	1:1 exposure in a security — the delta-1 building block for RWA	1×	Market risk	LIVE

Structured products

Crypto underlyings today · equities, indices and metals from Q4 2026

INSTRUMENT	WHAT THE USER GETS	TERM	CAPITAL	STATUS
Shark fin	Capital back, plus a bonus that grows the closer the underlying ends to the barrier	1 – 3 mo	100% protected	LIVE
Covered call	Premium income on a coin they already hold, in exchange for capping the upside	1 – 4 wks	Holds the asset	LIVE
Zero-interest certificate	Full capital protection with participation in the upside above a strike	3 – 12 mo	100% protected	LIVE
Principal-protected note	Capital back at maturity plus a capped return — the conservative entry product	6 – 36 mo	100% protected	Q4 2026
Barrier reverse convertible	High fixed coupon; capital at risk only if the barrier is breached	1 – 6 mo	Protected to barrier	Q4 2026
Dual-currency deposit	Enhanced yield, repaid in either of two assets depending on where the price ends	1 – 8 wks	Conversion risk	Q4 2026

24/7 real-world assets

Priced by DLT when the underlying market is closed — nights, weekends, holidays

INSTRUMENT	WHAT THE USER GETS	HOURS	UNDERLYINGS	STATUS
Tokenised spot	Equities, metals and commodities held as a token, tradable at any hour	24/7	US & EU names, XAU, oil	LIVE
Leveraged RWA	Perps and certificates on the same underlyings, including weekends	24/7	Indices, metals, energy	LIVE
Reference price feed	A continuous, hedgeable price you can quote against when the exchange is shut	24/7	All of the above	LIVE

Securitised perps — a perp's economics, delivered as a security

PAYOFF · OPEN-END LONG CERTIFICATE

Certificate value vs. underlying

Leverage is set by the distance to the barrier — not by a margin ratio. Loss is bounded by construction: no margin call, no negative balance.

THE MECHANICS, IN ONE LINE EACH

- **The user buys a certificate, not a position.** They pay the premium in full — that is the entire outlay and the entire risk.
- **The certificate tracks the underlying one for one**, multiplied by the ratio. Value = (price – barrier) × ratio.
- **The carry replaces funding.** A daily financing rate is rolled into the barrier, so the economics match a perp without a funding transfer.
- **If the barrier is touched, it knocks out** — the position closes at zero, exactly where a perp would have been liquidated.
- **DLT hedges the exposure** on the venue in the background. Your user never sees it.

KEY TERMS

Wrapper	Open-end certificate · ISIN or token
Regulatory regime	MiFID security — not a derivatives account
Leverage	up to 30x
Max loss	100% of premium — capped
Margin calls	None
Settlement	Cash or USDC
Transferable to self-custody	Yes, in tokenised form

Your user

Buys the certificate in your app

DLT

Broker of record, prices and hedges

Partner issuer

Supplies the wrapper and the ISIN

The same trade, at 30x — with no margin account

SIDE BY SIDE

same directional bet

	PERP ACCOUNT	SECURITISED PERP
Max leverage	20x	30x
What the user posts	Margin, topped up on demand	The premium, once
Margin calls	Yes	None
Negative balance	Possible	Impossible
Liquidation	Engine closes the position	Barrier knocks out at zero
Funding	Paid every 8 hours	Rolled into the barrier
What you must hold	Derivatives permission, margin engine, liquidation policy	Nothing — it is a security
Who faces the user	The venue	DLT, as broker of record
Self-custody	No	Yes, tokenised
Front-end experience	Perp ticket	Identical perp ticket

WORKED EXAMPLE

BTC long, 30x

BTC spot	100,000
Barrier / strike	96,700 — 3.3% below spot
Ratio	0.01 BTC per certificate
Certificate price	USDC 33
Exposure controlled	USDC 1,000
Effective leverage	30.3x

BTC +1%

+30%

cert 33 → 43

BTC -1%

-30%

cert 33 → 23

BTC -3.3%

-100%

barrier touched, cert → 0

WORST CASE

33

the premium, and nothing more

WHY THIS IS THE REVENUE ENGINE

A perp at 20x and a certificate at 30x are the same trade to the user — but the certificate lists as a security, so you can offer it without a derivatives licence, and the flow faces us rather than a venue. **Higher leverage, wider distribution, and a product your competitors cannot copy without a broker like us.**

WHO IT IS FOR

The 5–10% of your users who already trade leverage and generate the majority of your trading revenue — plus the users your current licence does not let you reach.

Turbos and mini futures — same machinery, different barrier

LEVERAGE IS A DIAL, NOT A SETTING

buffer to barrier → leverage

One instrument family covers 3x to 30x. The user picks the leverage; we issue the strike that produces it.

TURBO / KNOCK-OUT CERTIFICATE

- **Barrier sits at the strike.** Touch it and the certificate expires worthless — the equivalent of a liquidation.
- **Highest leverage on the shelf**, because the buffer is thinnest. 3x to 30x, long or short.
- **Open-end.** No expiry date, no roll — the user holds it as long as the barrier holds.

MINI FUTURE

- **Stop-loss sits above the strike.** On a knock-out the residual value between the two is paid back — the user does not lose the whole premium.
- **Softer product for a broader audience.** 2x to 20x, with a visible safety gap.
- **The strike and stop adjust daily** with the financing rate, so the leverage stays roughly where the user bought it.

WHAT YOU GET FROM LISTING THEM

- **A leverage ladder, not a single product.** The same user trades 5x on Monday and 30x on Friday without leaving your app.
- **Every underlying we price.** Crypto, equities, indices, metals and commodities — identical mechanics on all of them.
- **No margin infrastructure.** Fully-paid securities, settled in cash or USDC.
- **The ticket looks like a perp ticket.** Direction, size, leverage — the user never has to learn what a strike is.

Factor certificates — constant leverage, never knocked out

3× FACTOR VS. UNDERLYING · A CHOPPY WEEK

indexed to 100

Trading days · underlying alternates +5% / -5%

Leverage resets every day, so returns compound. In a trend that works for the holder; in a chop it works against them. This is the one thing to explain in the UI.

HOW IT WORKS

- **A fixed multiple of the daily move** — $\pm 2\times$ to $\pm 10\times$, long or short. The factor never changes.
- **The exposure is rebalanced each day** back to the stated factor. That is what keeps the leverage constant.
- **No barrier, no knock-out, no expiry.** A 5× factor cannot be stopped out by an intraday wick — the value falls, but the position survives.
- **Returns compound over multiple days**, so a factor certificate is not a buy-and-hold product. It is a momentum tool.

KEY TERMS

Factor	$\pm 2\times \cdot \pm 3\times \cdot \pm 5\times \cdot \pm 10\times$
Barrier	None
Expiry	Open-end
Max loss	The premium paid
Reset	Daily, at the reference close

WHY LIST IT NEXT TO TURBOS

- **It is the answer to "I got stopped out and then it came back"**. Different complaint, different product, same integration.
- **It is the easiest leveraged product to explain** — "three times the daily move" needs no barrier, no margin and no liquidation story. Factor products are consistently the top-selling leverage line on European retail platforms.

Structured products — one recipe, six products

THE WHOLE CATEGORY IN FOUR SENTENCES

A structured product is a **package**. Most of the money goes somewhere safe that earns interest. A small slice buys an option. **The safe part guarantees the capital comes back; the option part is the upside.** Change the mix and you change the payoff — that is the entire idea.

LIVE

Shark fin

Capital back in full, plus a bonus that grows the closer the underlying ends to a barrier. Break the barrier and the bonus is lost, never the capital.

FOR THE USER WHO SAYS

"I want yield, but I cannot lose the principal."

LIVE

Covered call

Premium income on a coin the user already holds, paid up front, in exchange for capping the upside above a strike.

FOR THE USER WHO SAYS

"My BTC is just sitting there earning nothing."

LIVE

Zero-interest certificate

Full capital protection, no coupon, and participation in the upside above a strike. The cleanest entry into a volatile asset.

FOR THE USER WHO SAYS

"I want crypto exposure without the drawdown."

Q4 2026

Principal-protected note

Capital back at maturity plus a capped return over six to thirty-six months. The most conservative product on the shelf.

FOR THE USER WHO SAYS

"Beat my savings account, take no risk with the principal."

Q4 2026

Barrier reverse convertible

A high fixed coupon paid whatever happens. Capital is only at risk if the underlying breaches a barrier well below spot.

FOR THE USER WHO SAYS

"Pay me a real coupon; I can live with a deep drawdown."

Q4 2026

Dual-currency deposit

Enhanced yield on a short deposit, repaid in either of two assets depending on where the price finishes.

FOR THE USER WHO SAYS

"I am happy to own either asset at that price."

WHY IT MATTERS TO YOU

This is the only family that **holds a deposit in place** for weeks or months — a balance that cannot leave for a competitor mid-term — and it reaches the users who will never open a leverage ticket. **All six run on the same pricing and hedging engine.**

Covered call — income on a balance that is doing nothing

PAYOFF AT EXPIRY · 1 BTC HELD, CALL SOLD AT 110,000

Portfolio value vs. BTC

The premium is credited on day one, whatever happens next. The only thing the user gives up is the move above the cap.

KEY TERMS · INDICATIVE

Underlying	BTC · ETH · gold · index
Term	1 – 4 weeks
Cap	~10% above spot
Premium	~1.5 – 2.5% of notional per month
Annualised	~20 – 30% p.a.
Downside	Same as holding the asset, cushioned by the premium
Settlement	Cash or in-kind

WHAT HAPPENS AT EXPIRY

Below the cap	Keeps the coin, keeps the premium the outcome in the large majority of months
Above the cap	Sells at the cap, keeps the premium a profitable exit — just not the whole move
Market falls	Same loss as holding, less the premium the premium is the cushion

WHY IT WORKS ON YOUR PLATFORM

It monetises the balance your users already leave sitting in spot. No new deposit, no leverage risk, no education problem — and it converts a passive holding into a recurring fee line.

Shark fin — yield with the capital fully protected

PAYOFF · BULL SHARK FIN

APR vs. underlying at expiry

The capital is always returned at maturity. Only the yield varies — that is the whole risk the user takes.

KEY TERMS · INDICATIVE

Underlying	BTC · ETH · gold · index
Term	1 – 3 months
Base APR	~2% p.a.
Max APR at the fin peak	up to 30% p.a.
Capital protection	100% at maturity
Minimum ticket	Matches your average spot ticket
Settlement	Cash or USDC

WHAT HAPPENS AT EXPIRY

Inside the fin Capital back, plus the enhanced yield
the closer to the barrier, the higher the APR

Below spot Capital back, plus the base rate
no loss, just the lower yield

Barrier breached Capital back, plus the base rate
the bonus is lost, the principal never is

ALREADY RUNNING

Roughly **\$60M a week** subscribed on one partner venue and **\$5M a week** on another. Typical take-up is around 5% of a user base, at a ticket size close to the average spot trade.

Real-world assets — priced when the exchange is shut

Sun
exchange closed

104

days a year the underlying exchanges are shut

~66%

of the hours in a week with no official price

24/7

continuous, hedgeable pricing from DLT

3

product shapes on the same underlyings

THE PROBLEM WE SOLVE

- **Your users are awake when the NYSE is not.** Roughly two thirds of the hours in a week, the underlying market for equities, metals and energy is closed.
- **Anyone can show a stale price. Almost nobody can trade on it.** The hard part is a continuous price you can actually hedge against — that is a risk engine, not a data feed.
- **We run the weekend book.** DLT quotes, takes the other side and hedges the gap risk into Monday's open. You quote to your user with a spread you control.
- **The gap risk is ours, not yours.** Pricing a closed market means carrying the risk that Monday opens somewhere else. That is a balance sheet and a hedging engine — the reason this is bought, not built.
- **Weekend flow is incremental.** It is volume your users cannot place anywhere else at that hour, on a user base you have already acquired.

WHAT YOU CAN LIST ON IT

Tokenised spot

Own the asset, any hour

+

Leverage

Perps & certificates, weekends included

+

Structured

Yield on the same underlyings

- **Same integration, new asset classes.** US and EU single names, indices, gold, silver, oil, gas, copper.
- **It is the one thing crypto platforms have that banks want,** and the one thing tradfi brokers cannot deliver on a Saturday.
- **104 days a year** currently earn nothing on a conventional shelf. That is the size of the prize.
- **One feed, three products.** The same continuous price powers spot, leverage and structured on every underlying we cover.
- **You keep the spread.** We quote you a two-way price; what you show your user is your decision.

WHY IT IS THE DIFFERENTIATOR

Every crypto venue can list another token. **Almost none of them can quote Tesla or gold on a Sunday** — and that is the product tradfi brokers are now paying to reach.

How you earn on it — and how fast it goes live

THE COMMERCIAL MODEL, BY PRODUCT FAMILY

indicative — final terms per partner

FAMILY	HOW THE REVENUE IS MADE	HOW IT SPLITS	TYPICAL TAKE-UP
Perps	Commission on notional, plus funding and financing spread	You set your mark-up on top of our rate	5 – 10% of users
Securitised perps & ETPs	Trading fee on every buy and sell, plus the spread we quote	Revenue share on both lines	5 – 10% of users
Structured products	Margin retained on the yield paid to the user	50 / 50 revenue share	~5% of users
24/7 RWA	Spread on the price we quote outside market hours	You set the spread your user sees	Whole user base
Cost to you	No build, no licence, no issuance, no risk book	Integration only	One API

WEEK 0
Paperwork

Distribution agreement, onboarding and product selection. We come with the licence and the issuer already in place.

1 agreement to sign

Nothing to build yet

WEEKS 1 – 3
Integration

One API in sandbox: quote, trade, position, settle. Same contract for every product family you will ever add.

1 API — quote, trade, position, settle

Your engineers, our support

WEEKS 4 – 8
First product live

Perps or securitised leverage, white-labelled in your front end, settling in fiat or USDC.

Live first product in your app

Revenue from day one

THEN
The rest of the shelf

Structured products, factor certificates, 24/7 RWA. Each one is configuration on our side — not another integration on yours.

+12 instruments on the same integration

Weeks, not quarters

THE OFFER

One integration, one counterparty, one risk engine — and a shelf that goes from a **20x perp** to a **capital-protected note** without you holding a licence, an issuer relationship or a book.
